Shisha (*hookah*) have been used to smoke tobacco by the indigenous people of Africa and Asia for at least four centuries. the Shisha was invented in India by a physician during the reign of emperor Akbar (who ruled from 1556 to 1605) as a purportedly less harmful method of tobacco use. the physician hakim Abdul Fath suggested that tobacco "smoke should be first passed through a small receptacle of water so that it would be rendered harmless". following popularity among noblemen, this new device for smoking soon became a status symbol for the Indian aristocracy and gentry, as they believed unsubstantially that the practice was relatively safe.

Important

The coal placed on top of the shisha extremely hot, please pay attention while using shisha. Please ask for one of our associates for assistance should you need help in moving the shisha. Enjoy!
